## EDUCATION

**University of Michigan** – College of Engineering  
*B.S.E. in Computer Science, Minor in Music | GPA: 3.64/4.0*

Ann Arbor, MI  
Aug. 2022 – May 2026

## EXPERIENCE

### Savant Labs

May 2025 – Mar. 2026

*Platform and Software Engineer*

*San Mateo, CA*

- Architected and implemented DataFabric-based metadata exchange framework to decouple JVM runtime from direct SQL dependencies, eliminating 100% of direct DB coupling and enabling VPC-compatible deployment
- Engineered event-driven metadata read/write pipelines using a pub-sub messaging architecture, supporting synchronous and asynchronous workflows and handling 10K+ requests/min in production-like environments
- Researched Agent2Agent (A2A) communication protocols to enable scalable multi-agent orchestration across distributed services, supporting workflows across 5+ integrated tools and systems for engineering team
- Developed and deployed an internal AI agent to automate developer workflows such as incident triaging and Slack summarization, reducing manual effort and supporting 80+ daily interactions across engineering teams

### Michigan Aeronautical Science Association

Jan. 2023 – May 2025

*Software Development Co-Lead*

*Ann Arbor, MI*

- Managed development of flight software and telemetry systems for high-powered rockets, enabling real-time data processing and seamless sensor integration during 5+ live test launches in mission-critical environments
- Collaborated with mechanical and avionics teams to implement guidance algorithms and automated pre-launch diagnostics, reducing check time by ~30% and improving overall launch reliability and system readiness
- Designed and integrated telemetry pipelines with mission control systems, enabling real-time monitoring, data visualization, and low-latency decision-making during live flight operations across distributed systems

### MSU Programming Competition

Sep. 2022

*Team Leader*

*East Lansing, MI*

- Led 3-person competitive programming team, driving solution strategy to achieve top 3 finish out of 50 teams
- Solved high-difficulty data structures and algorithms problems under time constraints, optimizing performance through efficient problem decomposition, algorithm selection, and consideration of time and space complexity
- Facilitated task allocation and prioritization across team members to maximize score, ensuring efficient use of time and improving overall team performance under competitive conditions and a fast-paced environment

## PROJECTS

### Deep Learning Image Classifier | Python, PyTorch, NumPy, CNNs, ViT

Apr. 2025

- Assembled and trained CNN-based image classifiers, achieving 97.4% validation AUROC and improving generalization through architecture tuning, hyperparameter optimization, and regularization techniques
- Applied transfer learning and Vision Transformer (ViT) models, improving test AUROC to ~0.80+ while analyzing trade-offs between performance, computational cost, and parameter efficiency across architectures
- Preprocessed and augmented image datasets using NumPy and PyTorch pipelines, applying transformations such as normalization, resizing, and data augmentation to improve model generalization across unseen test data

### Scalable Search Engine | SQL, HTML, CSS, Flask, REST, MapReduce

Dec. 2024

- Built scalable search engine over 1M+ web documents, implementing tf-idf, PageRank, and a segmented inverted index for efficient, high-performance ranked information retrieval across large-scale datasets
- Developed MapReduce pipeline and Flask-based Index/Search servers with REST APIs and parallel query processing to serve results at scale with efficient request handling and low-latency response times
- Utilized SQLite-based lookup and indexing strategies to optimize latency and support efficient data access

## TECHNICAL SKILLS

**Languages:** Java, Python, C++, C, SQL, JavaScript, Bash, HTML/CSS, MATLAB, R

**Frameworks:** Flask, React, Node.js, Django, FastAPI

**Developer Tools:** Git, Docker, Kubernetes, AWS, GCP, Visual Studio, IntelliJ, Gradle, Maven

**Libraries:** NumPy, pandas, Matplotlib, BeautifulSoup, Requests
